

<!--

All XHTML documents begin with a DOCTYPE declaration; this one is for XHTML 1.0 Strict. Normally, the DOCTYPE declaration is the very first line of XHTML files:

-->

<!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN" "http://www.w3.org/TR/xhtml1/DTD/xhtml1

<!--

+ + + + + BEGIN html + + + + +

-->

<!--

Change id="example-com" to your own domain, replacing dots with hyphens (e.g., example.org would be id="example-org"):

-->

<html xmlns="http://www.w3.org/1999/xhtml" xml:lang="en" lang="en" id="carrielaamanna-com">

<!--

+ + + + + BEGIN head + + + + +

-->

<head>

<!--

= = = = =

BASIC METADATA:

= = = = =

-->

<!--

This line can be left as-is; it specifies the text/html content type and the UTF-8 character set:

-->

<meta http-equiv="Content-Type" content="text/html; charset=utf-8" />

<!--

Always include a unique title for each of your pages, and brand it with your site name:

-->

<title>Curriculum Vitae for Dr. Carrie A. Lamanna</title>

<!--

Load reset CSS styles for desktop/laptop screens and print media:

-->

<link rel="stylesheet" type="text/css" media="screen, print" href="css/reset.css"/>

<!--

Load CSS for your desktop/laptop screen design:

-->

```
<link rel="stylesheet" type="text/css" media="screen" href="css/screen-images.css"/>

<!--
  Load corrective styles for IE 7 and earlier only, using conditional
  comments (see http://www.quirksmode.org/css/condcom.html):
-->
<!--[if lte IE 7>
<link rel="stylesheet" type="text/css" media="screen" href="css/screen-ie.css"/>
<![endif]-->

<!--
  Load CSS for your print design:
-->
<link rel="stylesheet" type="text/css" media="print" href="css/print.css"/>

<!--
+ + + + + CLOSE head + + + + +
-->
